System Features

The 19,200-seat arena, home of the NBA team, Golden State Warriors, was built in 1996 and in need of a video upgrade. It houses the latest video solutions that allow for easy-to-use management of HD display content.

- A video and digital content distribution system allows for enterprise digital signage, advertising, live in-house camera feeds, television channel line up, and concession menu boards all to be managed from a central location
- There are digital media players installed that are connected to video displays using HDMI
- Throughout the arena are multiple 2x3 video walls using 55" and 47" displays as well as large format displays in public spaces, concessions and private clubs
