

Project Profile

Children's Hospital Colorado
Aurora, CO

System Features

Children's Hospital Colorado completed a new 355,000-square-foot, 10-story East Tower. The hospital is considered a top-five national children's health facility.

- Simulation labs consist of HD video capturing and editing systems, touchpanel control, sound reinforcement, and digital and audio processing
- A video recording and streaming solution with playback channels, on demand, and live streaming is integrated with Active Directory to restrict access in compliance with HIPAA
- Conference rooms are setup to intelligently auto-select inputs when one video signal is present, prompt for a change when a new signal is detected or the system is off, and turn off when no video is present for a specified period of time
