System Features

ConocoPhillips, the third largest energy company in the U.S., set a high bar for both the system design and installation. The company wanted a system that would instantly power up at the touch of a mouse or connection of a laptop. The facility now houses more than 20 rooms of integrated AV.

- The AV systems are installed in multiple conference rooms, huddle rooms and training rooms and include digital switching systems, touchpanel control, interactive multi-touch work surfaces, videoconferencing, and room-scheduling systems
- A unique feature is the "Virtual Corridor," which is a full-size immersive videoconferencing system installed in a vertical format
