System Features

In order to be one of the leading health complexes in southwest Oklahoma, Duncan Regional Hospital needed an auditorium capable of holding large crowds for lectures and learning sessions. As part of the new DRH Pavilion, a new 100+ seat auditorium was constructed on the first floor to provide state-of-the-art video conferencing and presentation capabilities.

- The auditorium features mounted speakers on each side of the stage to supplement presentation resources as well as ceiling speakers for speech and program material
- High definition video playback is achieved by a 6,000 lumen projector projecting on a 161" diagonal screen using inputs such as: a Blu-ray player, document camera and laptop inputs to provide presentation versatility
