System Features

Noble Energy's culture embraces video as a key communication tool, so when it relocated its corporate headquarters to two 10-story towers, AV systems were installed in more than 100 conferencing/training rooms.

- Standardized room types were designed for different needs and include conference rooms, combinable multipurpose rooms, emergency response centers, video walls for engineering work rooms, executive meeting spaces, and a fitness center
- Control panels are in every room to give end users comfort of the same look and feel no matter what type of room they are using
- Touch panels are outside of most rooms and connect to room-booking tools that allow users to schedule meetings
