System Features

When United Airlines began to design its new 265,000 SF terminal, it quickly became clear that a state-of-the-art audio & visual system would be essential to complement the project's unique needs. The new system allows for clearer communication between airline and passenger so everyone can rest easy before their flights.

- 46" displays provide LED backlighting technology & save space with thinner cabinets
- JBL & Meyer speakers produce crystal clear sound for speech and extended frequency response for music
- Paging stations create a variety of access points for workers to communicate with passengers

Participants

Owner

United Airlines in partnership with Houston Airport Systems

Architect

Faithful+Gould

Builder/General Contractor

Manhattan Construction

AV Contractor

Ford Audio-Video Systems
