System Features

As innovations grows, so does the need for updated technology to facilitate research and collaboration. Houston Methodist, one of the premiere healthcare facilities in Houston, recently completed a massive renovation of their facilities. Ford was contracted to upgrade the existing AV technology in existing conference rooms and communal areas across twelve floors of the hospital.

- Lecture capture and video conferencing equipment in each conference room for greater collaboration
- Crestron control systems for greater room control and capabilities
- Da-Lite Displays installed in break-rooms and lounges to increase viewing angles and reduce ambient light reflection

Participants

Owner
Houston Methodist

Construction
Gilbane Construction Co.
