System Features

The Richard E. Berry Educational Support Center is a 15,000 SF multi-purpose complex capable of hosting up to 9,500 people. Due to the adaptable nature of the building, a versatile AV system was required to fulfill their ever-changing needs.

- One 33' center video wall and two 16.4' flanking video walls stream live video or prerecorded content
- Mobile audio mixing desk controls sound output throughout complex
- Distributed speaker system enables sound coverage for different arena configurations
- 16 wireless audio channels allow for different inputs
- All-in-one production computer and console manage all content and events
- Speakers installed overhead ensure audio is clear throughout the concourse outside the main arena
