

Blurring Campus Boundaries with Crystal Clear Video

Rogers State University in Claremore, OK

Rogers State University is incorporating a no-camera switching, walk-in-and-go video system to connect classrooms and students on three different campuses.

EQUIPMENT HIGHLIGHTS

- Polycom Group 700 Video Conference Codec
- Polycom RMX2000 Video Conference Bridge
- Marshall VVS-102-HDI Encoder/Decoders
- Crestron Controls

CHALLENGE

Joining 3 Campuses with HD Video

With students and faculty spread across three campuses and participating online, Rogers State needed a way to connect three master classrooms in three different cities in HD.

ACTION

Complex Design, Easy-To-Use Equipment

To provide an easy-to-use collaborative learning environment across campuses and online, Ford AV engineers designed for simplicity while incorporating the most advanced HD video equipment. The system was made intuitive by creating custom integrated controls in the classrooms.

RESULT

Effortless Multi-Campus Communication

Rogers State now has classrooms in three different cities that can connect with live HD video. Professors are able to see and hear students both online and in all three classrooms without camera switching or any advanced technical training.
