Protect Your Occupants With An
# EMERGENCY COMMUNICATION SYSTEM

An Emergency Communication System (ECS) ensures rapid communication with your staff and visitors from one centralized point of control.

Providing automated and live announcements, an ECS will connect all messaging systems. With the push of a button, an ECS can immediately alert all areas of your facility or campus to a life-threatening incident and guide people to safety.

TEXT & EMAIL
Emergency information is distributed via text and/or email to desktop and mobile devices *

PUBLIC ADDRESS SYSTEM
Announcement of live or pre-recorded spoken instructions

VISUAL PAGING
Digital Signage displays pre-recorded announcements and directions

EMERGENCY COMMUNICATION SYSTEM

VOICE OVER IP
Existing telephone systems are utilized for live announcements

FIRE ALARM
Fire Alarm announcements are made through the sound system

* Compatible with third-party software

How It Works

1

WARNING
EVACUATE THIS
AREA IMMEDIATELY
IF FIRE ALARM
SOUNDS

SMALL GROUP

2

EMERGENCY
COMMUNICATION SYSTEM

When SECONDS Count

1 Emergency situation occurs in a campus building

2 Campus police are notified of the event and initiate Emergency Communication protocol

3 Digital signage displays visual messaging throughout the campus

4 PA system announces both live and automated messages through the existing paging system

5 Emergency text and email messages are distributed to faculty, staff and students

An Emergency Communication System is integrated with your existing PA system

EMERGENCY COMMUNICATION SYSTEM

When **SECONDS** *Count*

The ECS allows voice announcements to be changed based on the type of incident, time of day, weather and other emergency conditions. For outdoor areas, automated security announcements can be provided throughout the day, improving outdoor public safety and creating a crime deterrent. The performance of the ECS and clarity of the PA system complement one another to meet and exceed safety requirements.[†]

MONITORING

The ECS is self-monitored and fault tolerant to ensure it is ready when you need it

MESSAGE PRIORITY

In an emergency, the system overrides regular announcements and ensures the emergency announcements are made

NETWORKED

The ECS operates on a standard data network, allowing monitoring and management of the system's functionality over the network

ALL CLEAR

After an emergency, the ECS restores facility operations to normal activity

† NFPA National Fire Alarm and Signaling Code, 3.3.85 Emergency Communications System. A system for the protection of life by indicating the existence of an emergency situation and communicating information necessary to facilitate an appropriate response and action. (SIG-ECS) NFPA Code, 3.3.85.1.3, In-Building Mass Notification System. A system used to provide information and instructions to people in a building(s) or other space using intelligible voice communications and including visible signals, text, graphics, tactile, or other communications methods. (SIG-ECS)

FORD AV

IS AMERICA'S LOW-RISK AV PROVIDER

EXPERIENCE | With 40 years of experience in design, installation and service of AV systems, millions of people experience Ford systems around the globe every day.

NATIONWIDE | Over 20 locations, located coast to coast, provide support for Ford's customers.

RESOURCES | More than 500 trained and specialized staff, ready to assist. (80 engineers & programmers, 25 project managers, 35 job superintendents and 125 installation technicians).

Apple Headquarters | Cupertino, CA

Bank of America Stadium | Charlotte, NC

Dallas/Ft. Worth International Airport | Grapevine, TX

Children's Hospital of Colorado | Aurora, CO
