

IT ALL STARTS WITH THE NETWORK

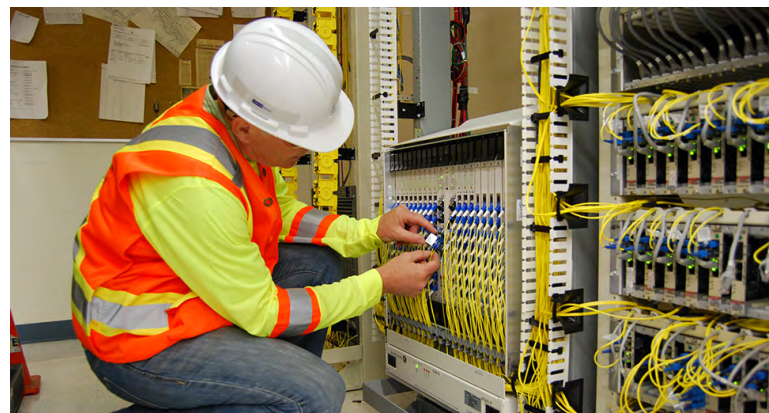

Today's technology devices become a network endpoint, requiring a high-performing core network infrastructure. Every organization's infrastructure design requirements are unique, and that is why Ford has over 100 certified engineers in addition to licensed professional engineers to ensure your network is ready to keep your organization running.

SERVICES

- Structured Cabling
- Fiber Cabling
- IT Consulting
- Switch & Router Setup
- VoIP Phones
- Cable Certification
- Wireless (Wi-Fi) Systems Design & Installation
- AV Remote Monitoring & Management
- Hardware Installation
- Microsoft Software Installation & Configuration

BENEFITS

- › One Partner for Both AV and Network Design & Deployment
- › Cisco Premier Integration Partner
- › Microsoft Gold Partner
- › Specialized Network Design for AV Technology

NETWORK INFRASTRUCTURE DESIGN & INSTALLATION

Ford's AV network engineers are Cisco and Microsoft certified making them uniquely qualified to design, build, and reconfigure business-grade networks. Our team designs and installs structured cabling, AV networks and complete Local Area networks.

AV REMOTE MONITORING & MANAGEMENT

Ford's AVRMM takes Remote Monitoring and Management (RMM) to the next level by monitoring both networked devices as well as non-networked AV equipment. Developed to meet the highest security standards, Ford's AVRMM service provides 24/7/365 on-premise and cloud-based solutions that monitor, notify, and resolve system failures while maintaining your critical operations.

WIRELESS NETWORK SERVICES

Wireless networking (Wi-Fi) is essential in any workspace and often the desired alternative to hardwired connections. Ford certified network specialists have the test equipment and software to plan, design, install, and test a solid & secure wireless network for your organization.

CONSISTENT coverage throughout your facilities.

CAPACITY planning to accommodate demand peaks.

RESILIENCY to interference that causes poor performance and dropouts.
