System Features

In order to enhance the arts and cultural experience of its populace, the City of McAllen constructed a 93,000 SF multi-purpose theater capable of hosting concerts, comedians and plays. A multi-functional AV system was necessary to adapt to each specific event.

- Speaker clusters in the main auditorium, along with balcony delays, provide even sound coverage
- Digital mixing console provides flexible operator control
- Outdoor pendant speakers channel announcements from the PA system
- Digital audio system with hardwired backup ensures seamless audio
- Intercom system for production team facilitates constant communication
