Project Profile

Orlando International Airport
Orlando, FL

System Features

With over 20 million annual passengers, the Orlando International Airport is the 7th busiest in the U.S. To help manage increased travel demand, an international terminal was constructed with state-of-the-art AV technology.

- **Sound System** | Digital paging stations ensure intelligible announcements do not overlap each other while ambient noise sensors in the airport automatically adjust the paging system volume, based on ambient noise levels
- **Video System** | The concourse utilizes flight-information displays to inform travelers of flight times, airport information, digital signage, way-finding, and emergency announcements
