

Project Profile

Metropolitan Museum of Art
New York, NY

System Features

As one of the world's premier cultural institutions, The Metropolitan Museum of Art (The Met) promotes education and cultural enrichment through exhibitions, and public programs. As part of a renovation of two education spaces, Ford AV integrated new audiovisual technology.

- AV over IP system linking both rooms to a unified control platform for centralized monitoring and operation
- Upgraded projection, audio, and loudspeaker systems providing improved clarity, coverage, and visual performance across both spaces
- Integrated streaming and control system enabling simplified operation and live broadcast of museum programming to external platforms
